

Cenotaph
Bolt Thrower

To play this song in tune with the CD you first have to tune your guitar down to D flat (C#). I have written the transcription for drop D tuning as this tune all their strings down, but you need a special whammy bar system to keep reasonable tension on the strings. I know because I asked them when they came to Perth.

For anyone who doesn't know how to de-tune in this way, this is how I do it...

- First tune the whole guitar down half a step (one semitone) to E flat played by holding the 5th string at the 5th fret.
- When you have finished, the following chord should be in tune with a low E5 power chord...

E5
eb|----
Bb|----
Gb|----
Db|-3--
Ab|-3--
Db|-3--

Notation: (n) means that this note is carried over from the last bar.
a . under a note means that it is to be played staccato.

It's fairly hard to show timing in TAB, but I've tried to space the notes to give an indication of how long each should be held. eg. 0 0 0 0 means 8th note downstrokes, 00000000 means 16th note alternate picking. Anyway, enough theory, here's the song.

...fade in play 8x

eb -----	-----
