

**If Winter Ends  
Bright Eyes**

play with vacuum running in the background

CODE

Capo on the first fret.

**C**                    **G**  
i dreamt of a fever,  
                         **Am**                    **F**                    **C**  
one that would cure me of this cold, winter set heart.  
                         **G**                    **Am**  
with heat to melt these frozen tears and burned with reasons  
**F**                    **C**  
as to carry on.  
**C**                    **G**                    **Am**                    **F**  
into these twisted months i plunge without a light to follow  
                         **C**                    **G**  
but i swear that i would follow anything  
                                 **Am**                    **F**  
if it would just get me out of here.  
**Am**                    **F**  
and so you get six months to adapt  
**Am**                    **F**  
and then you get two more to leave town.  
**Am**                    **F**                    **Am**                    **F**                    **G**  
in the event that we do adapt we still might not want you around.  
                         **C**                    **G**                    **Am**                    **F**  
and i fell for the promise of a life with a purpose  
                         **C**                    **G**                    **F**  
but i know that that is impossible now.  
                         **C**                    **G**  
and so i drink to stay warm  
                         **Am**                    **F**  
and to kill selected memories  
                         **C**                    **G**                    **F**  
because i just can't think anymore about that or about her tonight  
  
(and so forth.. you know the rest)

i know this isn't the best but i hope it helps...
