Before you get confused, let me tell you that the chord names are correct. However, they may not correct relative to the tuning. For example The first chord (x466xx) should be C#, but the guitar would be down a halfstep the chord is really a C. Sorry if this is confusing, but the song is probably played in Drop D and i prefer not to play in drop D so i tried to make it work for both Drop D and Down a half step. You can always email me if you are still confused.

*Edit: If you decide to play it in the down-a-half-step tuning, you may find it easier to read by going looking to the left of your screen and translating all of the chords up a half step. Then the chords you read will be relative to the tuning.
